

DERBY GROUP · OUTSOURCED SALES FOR THE BANK

Sourcing CRM

What Derby Group built to run its sourcing for the bank, the problems it removes, and what it now tells every level of the agency

WHERE WE STARTED

At Derby Group, a file's journey lived in phones, sheets and memory

No single record

Sourcing details were shared over WhatsApp and spreadsheets. Nobody could tell the bank with certainty where a customer's file was.

Verification was invisible

Processors called customers but call outcomes, call-backs and corrections were not captured anywhere a manager could see.

Targets tracked by hand

Achievement against targets, deviations and product mix were compiled manually at month end, too late to act on.

Customer data exposed

Emirates ID numbers, salaries and phone numbers travelled in chat groups with no masking, no access trail and no retention control.

Everyone saw everything

There was no way to limit a processor to their region or a team leader to their own team, or to keep history when staff moved.

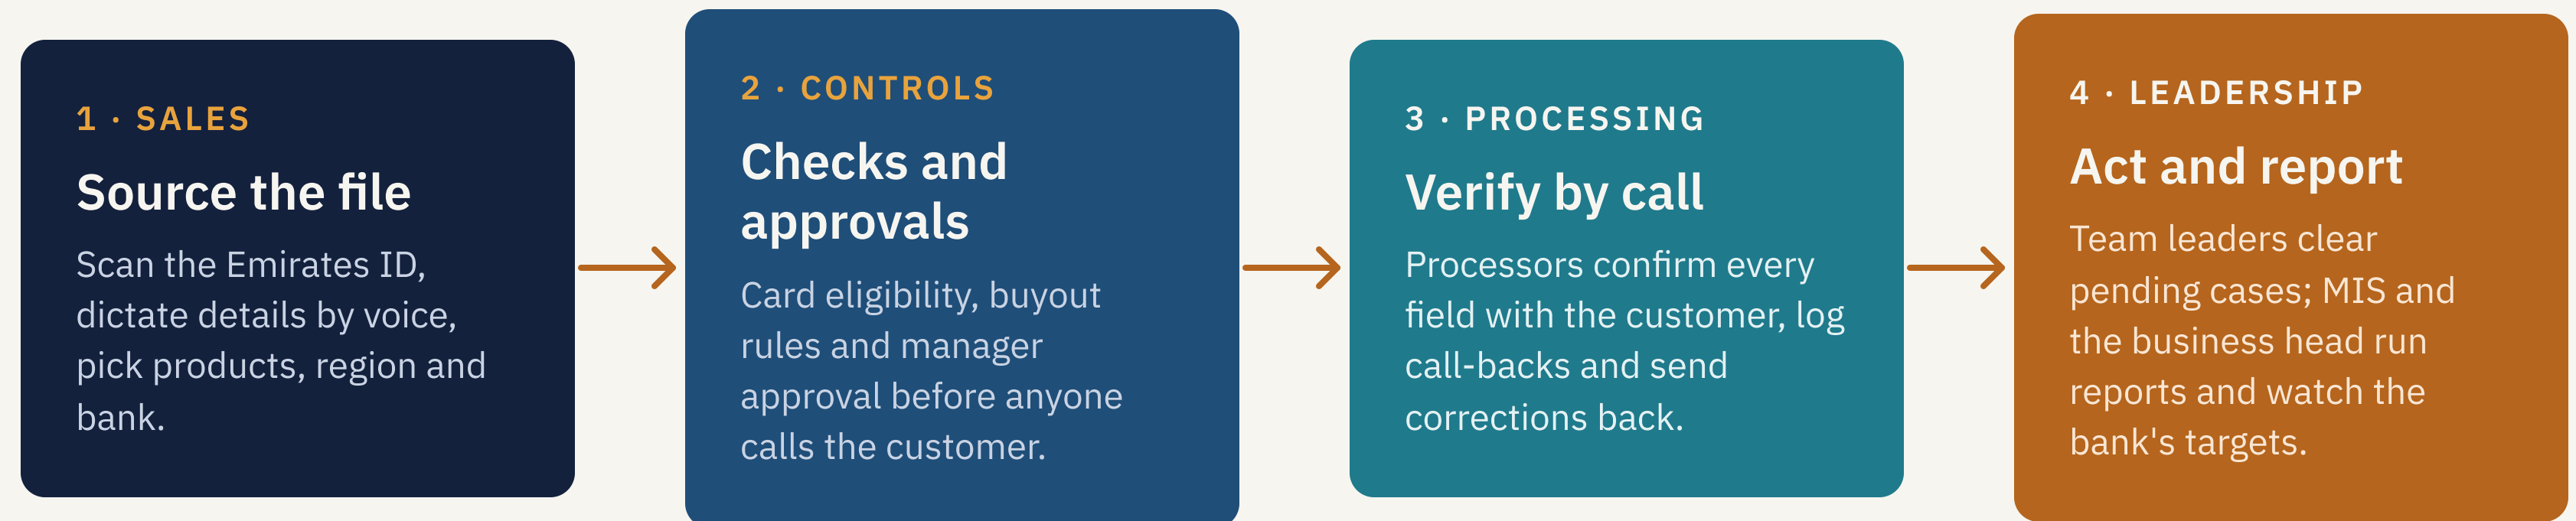

Rules checked after the fact

Cards sold below the bank's salary requirement or below what the customer qualified for only surfaced in the bank's audits, if at all.

WHAT WE BUILT

One system carries every file from Derby Group sourcing to bank completion

Eight roles

Derby Group sales, processing, team leader, ASM, sales manager, MIS, business head and governance.

Four products

The bank's credit cards, personal loans, auto loans and accounts, each with its own fields and rules.

Two regions

Dubai and Abu Dhabi, on every staff member and every file, with a region switch for leadership.

Works on a phone

Built for the sales floor: scan, dictate and submit from a mobile browser, no app install.

The form asks for exactly what each product needs

Every file

- Emirates ID scanned from the phone camera, fields filled automatically
- Voice dictation for the rest of the customer details
- Region (Dubai or Abu Dhabi), prefilled from the staff member's own region
- Customer's current salary transfer bank from a drop-down of UAE banks
- Photo of the customer's documents, watermarked with the staff name

Credit cards

Card chosen from the bank's product list of 65 cards. Category, points and minimum salary fill in by themselves. Fee type recorded.

Personal loans

Fresh or buy-out, tenure up to 48 months. A buy-out must name the personal loan being bought, its bank and amount. Secondary buy-outs (cards with limits, non-STL loans, auto loans, mortgages) are confirmed on every loan.

Auto loans

New or used, car make, model and year, dealer details, lead source, rate of interest and tenure up to 60 months.

Every call, correction and hand-off is on the record

- 1

File lands in the processor's queue
Only files from the processor's own region appear. The oldest waits at the top.
- 2

Processor calls and ticks each field
Name, ID, salary, employer, products and loan details are confirmed one by one with the customer.
- 3

No answer? Schedule a call-back
Call attempts and call-back times are logged, so a file never silently stalls.
- 4

Mismatch? Send back for correction
The sales person fixes the file in the chat thread and it returns for re-verification of the changed fields only.
- 5

Verified, then completed or rejected
Pending cases go to the team leader or sales manager queue; cards completed by the bank get their activation tracked.

Statuses a file can hold

New · Awaiting approval · In verification · Call-back · Correction needed · Re-verification · Verified · Action pending · Completed · Rejected

Built-in chat per file

Sales, processors and managers talk inside the case, not in WhatsApp. The thread stays with the file forever.

Card eligibility is checked at the moment of sale

SALARY BELOW THE CARD MINIMUM

The staff member must explain

A warning appears with two choices: **product deviation** or **new promotion**. The choice is stamped on the file and shown on the customer detail page.

NO REASON GIVEN

The file waits for a manager

It moves to an **awaiting approval** queue. The team leader, ASM or sales manager picks the reason and releases it to processing, or declines it with a note.

SALARY QUALIFIES FOR MORE

Staff are nudged upward

If the customer qualifies for a higher card category than the one chosen, the form lists those cards. A lower sale is still allowed, and recorded as a down-sell.

The rules come from the bank's product list, now loaded: 65 cards in 21 families across three categories (Mass, Premium and Super Premium), each with its minimum salary and the points it earns. MIS or the business head can upload a newer list at any time.

WHO SEES WHAT

Each role sees its own slice, and nothing more

Role	Files visible	Can also
Derby Group sales staff	Their own files only	Source new files in either region
Processing	Files from their own region (Dubai or Abu Dhabi)	Verify, call back, send for correction
Team leader, ASM, sales manager	Files of staff in their own team	Approve card exceptions, move files within the team, clear pending cases
MIS and business head	Everything, with a Dubai or Abu Dhabi switch	Add staff, upload lists, generate targets, run reports
Governance	Everything, read-only	Access log and governance reports

When a staff member changes team

Open files move to the new team leader and manager for the current cycle. Completed, rejected and in-checker files stay tagged under the old team, so past credit is never lost.

When a staff member leaves

A date of leaving disables the login on that day. The account cannot be re-enabled until the date is cleared, and the files remain for the team's record.

STAFF AND TARGETS

Derby Group targets are generated from the staff master, not typed in

One record per staff member

- HRMS code, unique, used as the login username
- Region, team leader, ASM and sales manager
- Date of joining and date of leaving
- Salary and core product: cards, personal loans, auto loans or multi-product
- Added one at a time or by bulk upload, by MIS or the business head only

CREDIT CARDS

Points target by staff salary band. Each card sold earns the points on the product list.

PERSONAL LOANS

Disbursal amount target by staff salary band, for example AED 600,000 for a salary of AED 5,000.

AUTO LOANS

Points target by staff salary band. Each loan earns points by its amount band.

MIS uploads the salary bands and point tables once per cycle and presses Generate. Achievement updates as files complete, and the team view rolls it up from staff to team leader to manager to region.

The bank's customer data is masked, watermarked and logged

Masked by default

Emirates ID, phone and salary show partially. Revealing a value is a deliberate click, and that click is recorded.

Access log

Every view, reveal, export and status change is written with the user, time and file. Governance reads it as a report.

Watermarked documents

Uploaded images carry the staff name and time, so a leaked photo points back to its source.

Controlled accounts

Only MIS and the business head create logins. Leavers are switched off on their leaving date. Bulk uploads are limited to the same two roles.

Runs on Derby Group's own server with no outside services: a single Node.js process and one database file, with a deployment guide, backup script and environment template handed to Derby Group IT. Customer data never leaves the agency's infrastructure.

ISSUES IT SOLVES

Before and after, problem by problem

Before	With the CRM
Files lost between WhatsApp and Excel	One record per file with a status, an owner and a full history
Typing errors in ID numbers and names	Emirates ID scanned from the camera and verified field by field on a call
Nobody knew a file was stuck	Call-backs, corrections and pending queues are visible to the team leader the same day
Card sold below the bank's salary rule, found in audit	Blocked at the form unless a deviation or promotion is declared or a manager approves
Customer qualified for a better card, sold a lower one	Staff prompted with the higher cards; down-sells counted in a report
Processors and managers saw every region and team	Each role limited to its region or team; leadership switches region on demand
Targets reconciled manually at month end	Generated from salary bands, achieved live as files complete
Bank customer data unmasked in chat groups	Masked fields, watermarked documents and an access log the agency can show the bank

Every level opens to the numbers it is responsible for

Sales staff

My files by status, what needs my correction, my target and achievement so far this cycle.

Processing

My region's queue, call-backs due now, files waiting on sales, verified today.

Team leader, ASM, manager

Team pipeline, card approvals waiting on me, action-pending cases, each staff member against target.

Business head, MIS, governance

Both regions or one, the full Derby Group hierarchy from region to staff, exceptions and the access log.

TEAM VIEW

One tree: region, then sales manager, then team leader, then staff. Each row shows files sourced, completed, rejected, target and achievement for the cycle, and expands on tap.

PREVIOUS TEAM ROWS

Staff who moved or left still appear under the team that owned their files, so a manager's past cycle numbers never shift after the fact.

Ten reports, any cycle or date range, by region, to CSV

Report	What it answers	Who runs it
Sourcing	Files sourced per staff, team and product in the period	MIS, business head, managers
Pipeline	Where every open file sits and for how long	MIS, business head, managers
Verification	Calls, call-backs, corrections and turnaround per processor	MIS, business head
Targets	Target against achievement per staff for the cycle	MIS, business head, managers
Cards	Cards sold by family, category and activation	MIS, business head
Card exceptions	Every deviation or promotion sale, who declared it and who approved it	MIS, business head, governance
Card down-sells	Cards sold below the category the customer's salary qualified for	MIS, business head, governance
Governance	Rejections, re-verifications and exceptions by team	Governance, business head
Access log	Who viewed, revealed or exported which customer's data	Governance
Register	The full case register for the period, one row per file	MIS, business head

Each run is logged with who ran it and when. The region switch applies to every report, so the business head sees Dubai, Abu Dhabi or both, and any report exports to CSV for the bank.

What Derby Group can see, and show the bank, that it could not before

Conversion

Of the files each team sources, how many complete, how many are rejected, and at which step they fall out.

Turnaround

Days from sourcing to verification to completion, per processor and per region, and which files are ageing.

Quality of sourcing

Which staff members' files most often need correction, and on which fields.

Deviation rate

How many card sales rely on a deviation or a promotion, by team and by approver, and how many were declined.

Lost upgrade value

Customers sold a lower card than their salary allowed, and which teams do it most.

Product mix and sources

Card families, fresh against buy-out loans, which banks are being bought out, auto loan dealers and lead sources.

Target health

Achievement against target live through the cycle, rolled up from staff to region.

Who touched what

Every reveal and export of customer data, by user and time, for any audit question.

WHAT COMES NEXT

Ready for IT, waiting on two inputs

✅ Done and handed over

- Working demo with sample users for every role
- Deployment guide for IT, as a document and PDF
- Backup script, environment template and transfer options
- Automated tests covering the workflow, scoping and reports
- Bulk upload templates for staff, files, cards and targets
- The bank's card product list loaded: categories, salary minimums and points

🕒 Needed from Derby Group and the bank

- Salary bands and targets for cards, personal loans and auto loans
- Auto loan points table by loan amount
- Derby Group staff master upload with HRMS codes, regions and hierarchy

💡 On hold, by choice

- Automated calling bot for first-contact verification
- WhatsApp alerts to staff on status changes
- Go-live hardening: HTTPS, password policy, log retention
- Integration with the bank's core systems, subject to the bank's approval

IN ONE LINE

Every file Derby Group sources for the bank has one record, one owner and one history. Every bank rule is checked at the point of sale. Every level sees its own numbers.

Questions and the demo walkthrough
